

# Plastics Corporation

## BACKGROUND

**GP PLASTICS** was opened in Dallas, Texas in 1968. Today, we employ several hundred individuals in two plants located in Dallas and Farmers Branch, Texas. Our major products lines are industrial trash can liners; plastic bags for home delivery of newspapers, and specialty packaging including produce bags on headers, which are used in supermarkets.

## QUALITY

As a full-line extruder and converter, with domestic plants and raw material sources, we control the quality of our product from the raw stage through packaging. We use 100 % linear low-density resins to produce a tough bag that can withstand the rigors of trash pick-up, handling and extreme weather conditions, including excessive heat. Each new LLD batch of resin is checked for strength by dart impact test of film strength, and all products are checked continuously during, and after the production process. In addition to providing clear, and colored stock, we produce a line of biohazard printed bags that comply with health department requirements throughout the United States.

## SERVICE

Service is key to our corporate goals. We have geographic outside territory managers, and brokers that cover the United States, and a full inside administrative staff to serve your needs. GP understands the importance of JIT shipment and delivery, quality products, and readily available customer service help. With the purchasing power of two large plants, we have been able to provide products to all our customers, even during times of severe raw material shortages.

**PRODUCT LINES**

**GP PLASTICS can liner division produces a wide variety of stock products. We have available literature that details the various lengths, widths, gauges and material content available in our stock line. In our LLD product line we produce a flat bag, which adds to the strength and additional filling capacity of the product. Additionally, we can provide you with non-stock special order products to meet most specific needs. Ask your sales representative or customer service about the requirements for these items.**

**IN SEARCH OF A BETTER BAG**

**GP Plastics conducts on going research to develop improved resins and manufacturing techniques to supply you with, the best bags available.**

**RECYCLING & ENVIRONMENTAL CONCERN GP supports the current environmental trend of source reduction by producing high performance bags that require a minimum amount of resin. We recycle all primary in-plant scrap, and re-pelletize it for use in some of our trash can liners, and news bags.**

**YOUR STRONGEST CHOICE**

**For quality, value, and service reliability, there's only one source, *GP PLASTICS*.**

*Specializing in Quality and Service*
